

GEDORE MODULE SYSTEM - COMBINE AS PER DIAGRAM

The fields of use for the GEDORE range of tools are just as varied as the tools themselves. The GEDORE modular system has been devised to provide the employee at his place of work with an optimally matched set of tools and a maximum of flexibility in their selection. The many different module variants ensure that tool trolleys and mobile workbenches are equipped as individually required to bring about an exact arrangement of tools for the jobs on hand. Innumerable combination possibilities result from the large selection of pre-configured modules. GEDORE also has an ideal solution on hand for those special cases and requirements not covered by the module range in the form of the iMOD supply offer. It allows for an individual design of the tool modules, precision-adjustment to one's own needs and also ensures a perfect tool arrangement.

A joint basic raster depicts the drawer sizes and module variants. The drawers (blue) - depending on the raster involved - can be individually combined with the tool and distance modules (in colour). Appropriate configuration examples are on Page 005.
